

Eccentric Screw Pumps

Series AE1+1H, AE2H, AE2+2H, AE4H Design ID

Application

For handling liquid to highly viscous, neutral or aggressive, uncontaminated or abrasive liquids, liquids containing gases or which tend to froth, also containing fibres and solid matter.

In waste water and waste water treatment engineering, chemical and petrochemical industry, paper and cellulose industry, soap and fats industry, paint and lacquer industry, food and beverage industry, plastics industry, ceramics industry, agriculture, sugar industry and in shipbuilding.

Function

Self-priming, two or four-stage, rotary positive displacement pump. Conveying elements are the rotating eccentric screw (rotor) and the fixed stator. In the cross-sectional plane, both are in contact with one another at two points forming two sealing lines along the length of the conveying elements. The contents of the sealed chambers which are formed as the rotor turns are displaced axially and with complete continuity from the suction to the delivery end of the pump. Despite rotor rotation, there is no turbulence. The constant chamber volume excludes squeezing, thus ensuring an extremely gentle low-pulsating delivery.

Structural design

By external casing connecting screws (clamping screws), the pressure casing, stator and suction casing are interconnected. The suction casings are designed particularly favourable to flow. The pump sizes 50 to 2700 in cast iron design are provided with staggered holes for cleaning. The stator vulcanized into a tube or shell casing (even elastomer wall thickness) is provided with external collars vulcanized to it on both sides reliably sealing towards the suction casing and delivery casing and protecting the stator shell from corrosion.

Stators are supplied:

with uneven wall thickness:

- two+two-stage for sizes 100, 200, 380, 750, 1450, 2700
- four stage for sizes 12, 25, 50, 100, 200, 380, 750, 1450

with even wall thickness:

- single+single stage for size 2700
- two-stage for sizes 100, 200, 380, 750, 1450

The exchangeable shaft sealing housing or mechanical seal housing (subsequent conversion to another sealing variant is possible) are arranged between the suction casing and bearing bracket. The sealing housings (shaft seals) are easily accessible as the complete bearing unit can be withdrawn from the driving shaft without any further pump dismounting.

Bearing of the driving spindle is effected in the bearing bracket. The torque of the drive is transmitted over the driving shaft and the joint shaft onto the rotor. On both sides, the joint shaft ends in liquid-tight encapsulated bolt joints, which are designed particularly simple and sturdy properly taking the eccentric movement of the rotor.

Shaft seal

By uncooled, cooled or heated stuffing box or by uncooled or cooled maintenance-free unbalanced, single or double-acting mechanical seal.

Material pairing and design are adapted to the respective operating conditions. For further data, refer to pages 4, 5.

The stuffing box or mechanical seal housings of the various shaft sealing types are interchangeable within one size. The various mechanical seal housing parts form a modular construction system and, in case of conversion to a different mechanical seal design, can be easily combined with one another.

Installation spaces for mechanical seals according to DIN 24 960 (except for double mechanical seal).

For further data, refer to pages 4, 5, 6 and 7.

Technical data

Deliveries, admissible speed ranges and required drive powers are to be taken from the performance graph on page 3 and/or the separate individual characteristic curves.

			AE.H
Delivery	Q l/min	up to	2900
Temperature of fluid pumped	t °C ①	up to	150
Delivery pressure	Δp bar	up to	24
Pump outlet pressure	p _d bar ④	up to	25
Attainable underpressure	p _s bar ③	up to	0,95
Viscosity	η mPa·s ②	up to	270.000
Admissible solids content	% by vol. ③	up to	60

The mentioned performance data are to be considered as a product and performance abstract only. The particular operating limits can be taken from the quotation or order acknowledgement.

Max. admissible grain sizes and fibre lengths

Size	12	25	50	100	200	380
max. grain size mm	2	2,5	3	3,8	5	6,8
max. fibre length mm	35	42	42	48	60	79

Size	750	1450	2700
max. grain size mm	9,5	14	20
max. fibre length mm	98	130	210

Increasing solids content and increasing grain size require a reduction of the pump speed:

- ① depending upon the fluid to be pumped and the elastomers employed.
- ③ depending upon the pump size/design, speed and fluid to be pumped.
- ④ depending upon the direction of rotation, inlet pressure.

Drive

Driving possibilities see page 12.

Drives of any manufacturers can be employed. For the technical data and dimensions, please refer to the documents of the manufacturers.

Direction of rotation

Clockwise looking from the drive end is standard. Opposite direction of rotation is possible. For clockwise rotation the permissible pressure at the shaft seal and the permissible pressure of the suction casing, then discharge casing, (16 bar) must be considered.

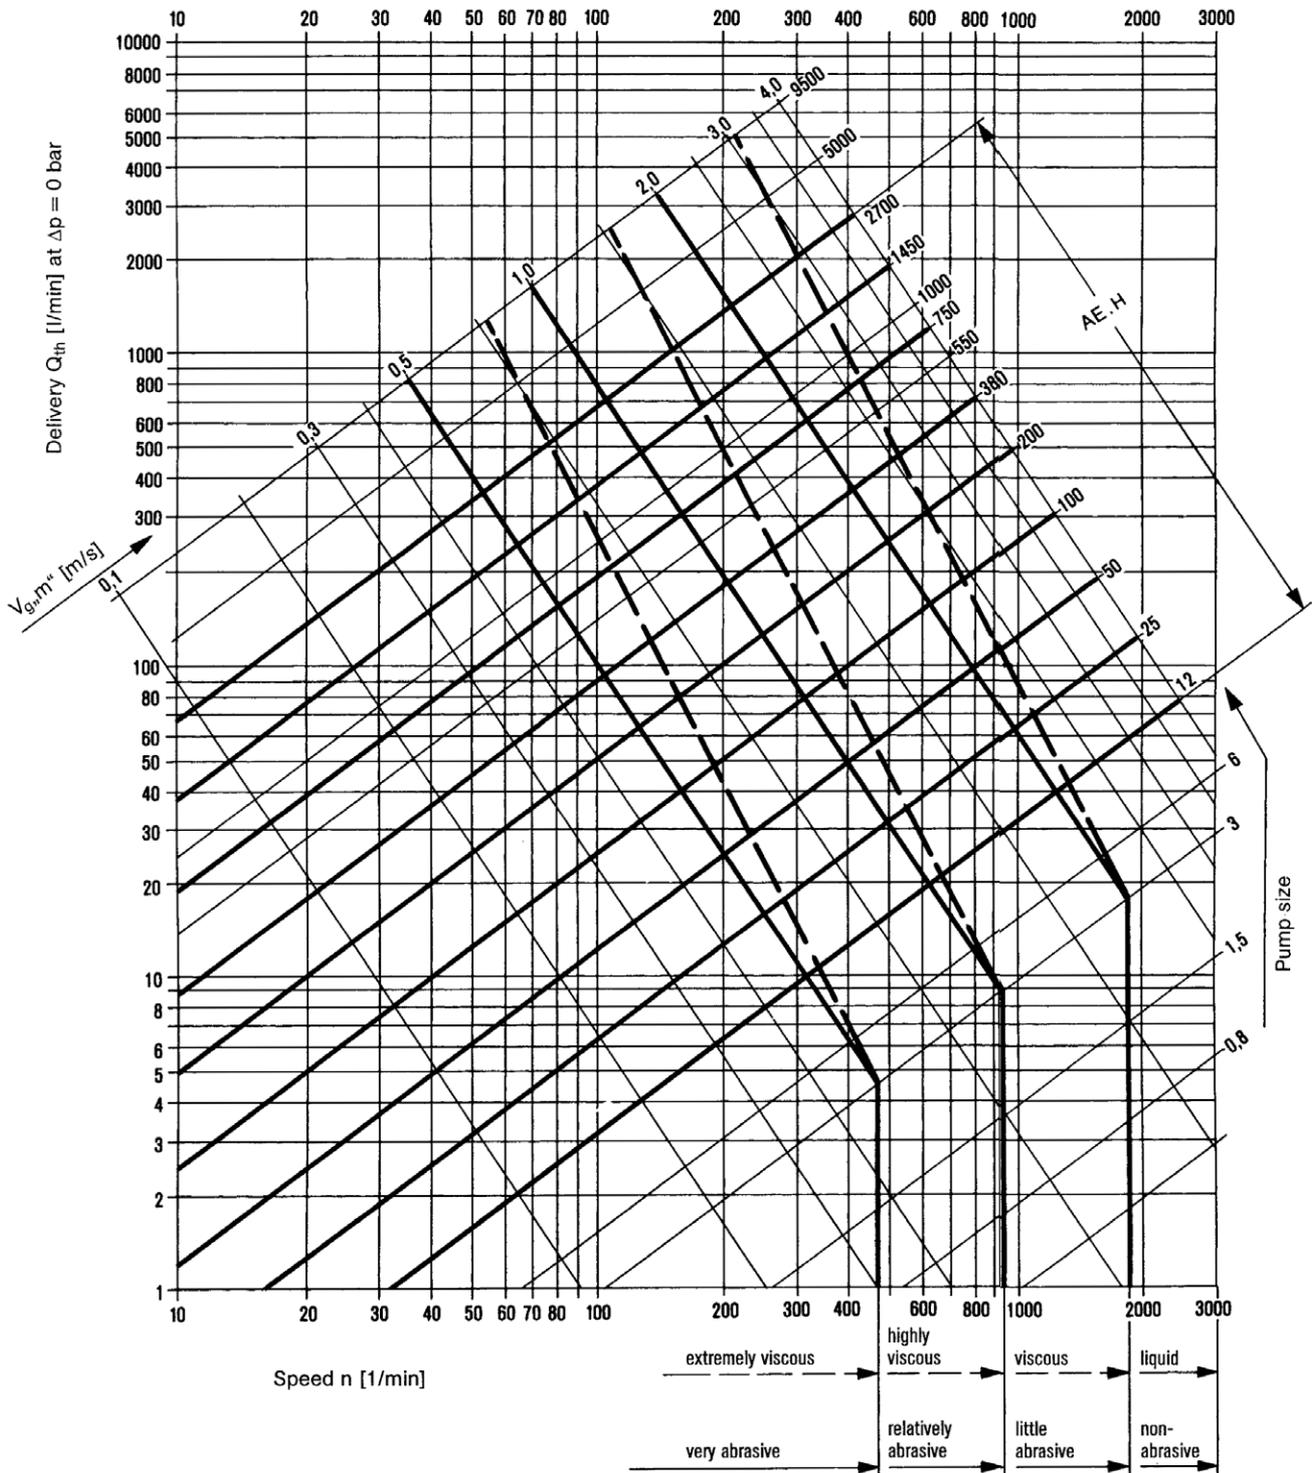

Installation

AE pumps may be installed horizontally or vertically. In case of vertical arrangement, "shaft shank downwards" is not admissible.

By means of a flexible coupling or a via gear (as a rule, V-belt drive), the pump and drive are connected with one another and mounted on a common base plate. For aggregate dimensions, please inquire.

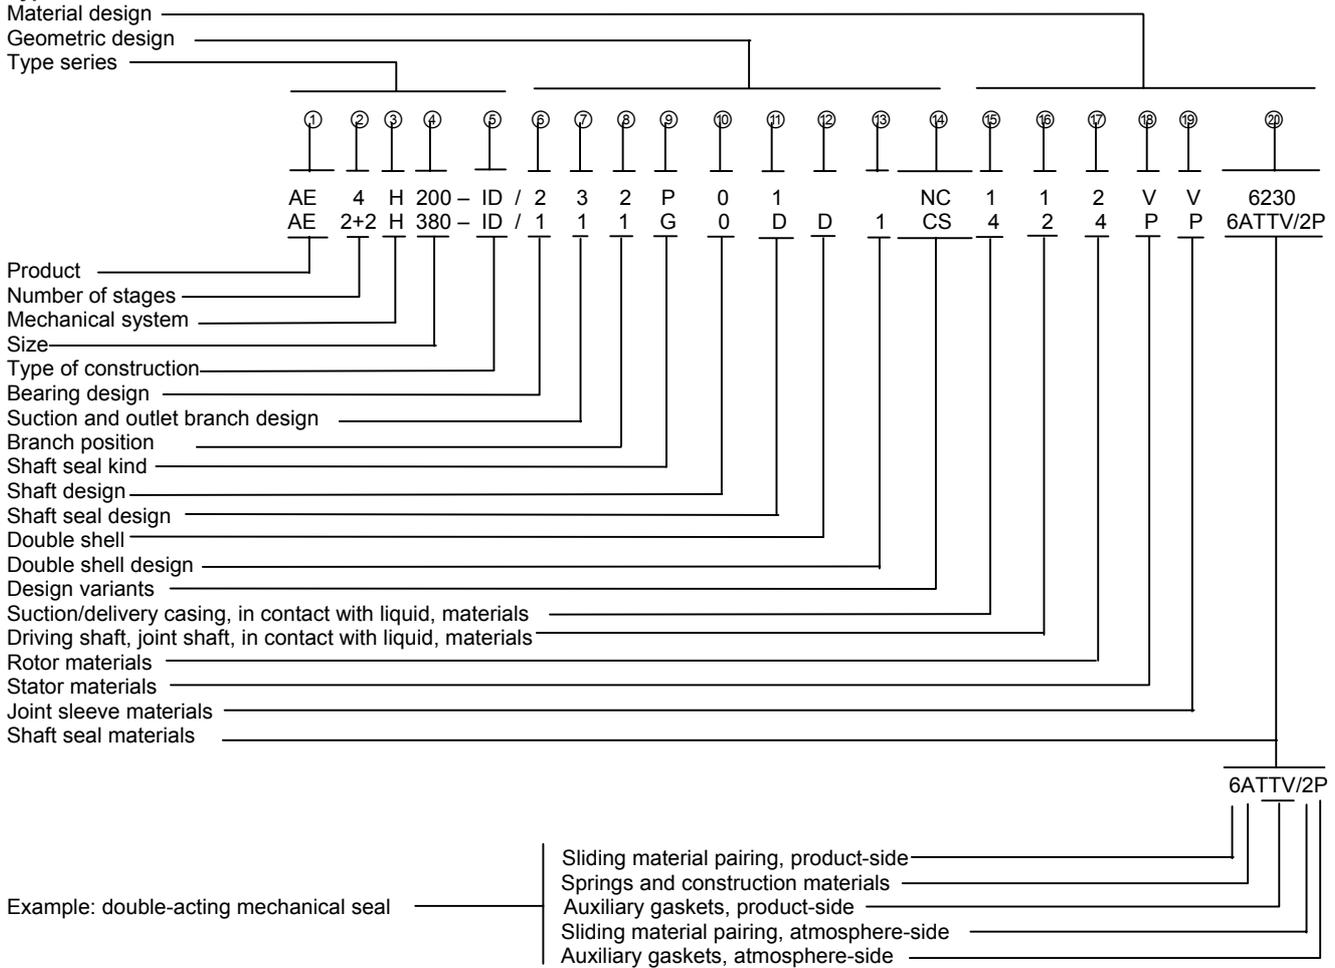

Performance graph

For a rough selection of the pump size and speed as a function of the requested delivery and kind of fluid to be pumped. $V_{g,m}$ = available, mean sliding speed of the rotor in the stator.

Sizes of the series AE.H. Data on the performance range not covered by AE series are to be taken from the rear side of this brochure and/or the individual brochures of the other series.
For exact performance data, please refer to the individual characteristics.

Type code

Explanations to the type code:

Position in type code	Designation	Design
①	Product	ALLWEILER eccentric screw pump
②	Number of stages	1+1 = single-stage + single-stage up to delivery pressure Δp 24 bar (stator with even elastomer wall thickness), size 2700 2 = two-stage up to delivery pressure Δp = 24 bar (stator with even elastomer wall thickness), sizes 100, 200, 380, 750, 1450 2+2 = two-stage + two stage up to delivery pressure Δp 24 bar, sizes 100, 200, 380, 750, 1450, 2700 4 = four-stage up to delivery pressure Δp 24 bar, sizes 12, 25, 50, 100, 200, 380, 750, 1450
③	Mechanical system	H = rated for delivery pressure Δp 24 bar
④	Size	Possible sizes: 12, 25, 50, 100, 200, 380, 750, 1450, 2700 The numbers indicate the theoretic delivery in l/min with $n = 400$ 1/min and $\Delta p = 0$ bar
⑤	Design	ID = Industrial design with external bearing
⑥	Bearing design	1 = hose-proof, radial bearing drive-side with sealing washer, axial bearing pump-side with shaft seal ring. Both bearings regreasable. For horizontal installation
⑦	Suction and outlet branch design	1 = DIN flanges 3 = ANSI flanges X = Suction and/or delivery branch of special design — according to dimensional sheet, pages 9 and 10
⑧	Branch position	1, 2, 3, 4 – For the arrangement, please refer to the representation, page 9. Arrangement 3 for size 12 not possible.
⑨	Shaft seal type	P = Stuffing box or other non-mechanical shaft seal G = Mechanical seal (mechanical shaft seal)
⑩	Shaft design	0 = Shaft without shaft sleeve 1 = Shaft with sleeve (not possible with pum size 12)
⑪	Shaft seal design	Stuffing boxes P01/P11 = Stuffing box of normal design (without sealing chamber ring / without flushing ring) P02/P12 = Stuffing box with flushing ring P03/P13 = Stuffing box with internal sealing chamber ring P04/P14 = Stuffing box with external sealing chamber ring P0X/P1X = Non-mechanical shaft seal of special design

Sectional drawing and component list

Series AE4H – design ID

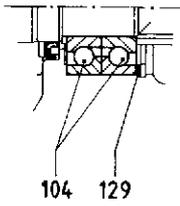

Bearing 1: Hose-proof, radial bearing drive-side with sealing washer; axial bearing pump-side with shaft seal ring.
 Both bearings regreasable. Only for horizontal installation.
Shaft seal P01: Due to particularly great packing length, versatile, admissible pressure at the shaft seal
 $p = -0,7$ to 16 bar.

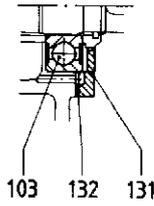

Series AE2+2H – design ID

Bearing 1 and 2: for size 380 and above
Axial bearing with two-single-row angular contact ball bearings.

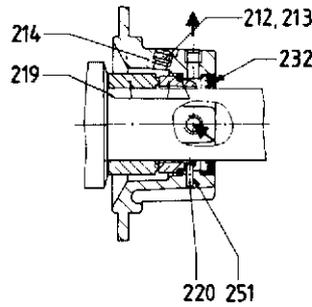

Radial bearing in case bearing 2 (only for vertical installation with shaft shank upwards)

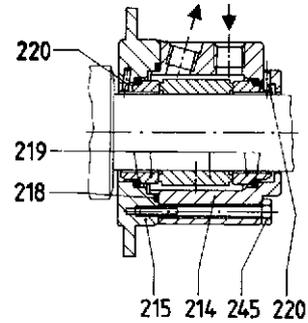

GOK/GON Single mechanical seal, DIN 24 960, K/N design, U shape. For employment, please inquire. $p = -0,5$ to 16 bar

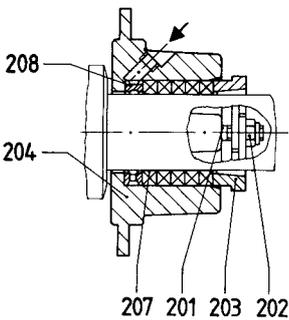

GOS/GOT Single mechanical seal, DIN 24 960, K/N design, U shape, rotating part with integrated locking device, with flushing liquid connection and pump-side throttling ring. For employment, please inquire, $p = -0.5$ to 16 bar

GOQ Single mechanical seal, DIN 24 960, K design, U shape with quench. For employment, please inquire, $p = -0.5$ to 16 bar

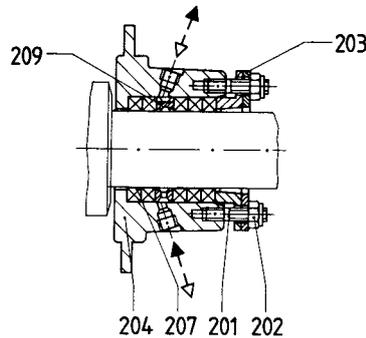

GOD Double mechanical seal, with sealing liquid connection. For employment, please inquire, $p = -0.95$ to 16 bar

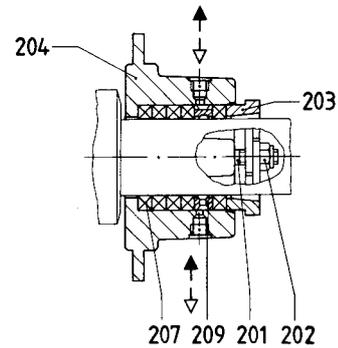

P02 Stuffing box with flushing ring

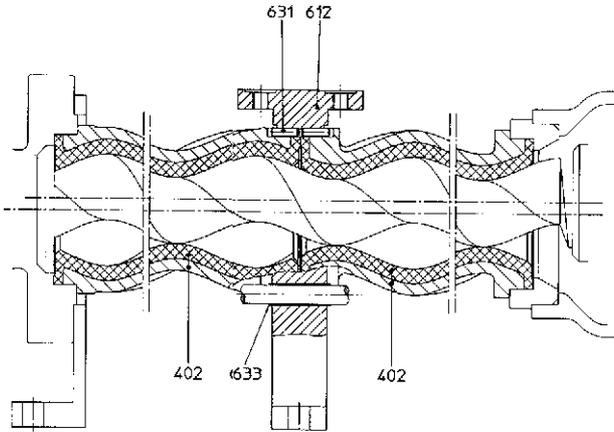

To be employed for very abrasive fluids pumped with external flushing
 $p = -0.7$ to 12 bar

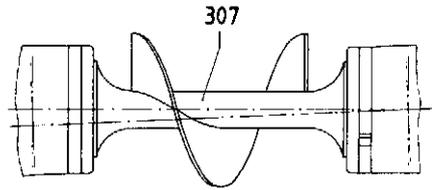

P03 Stuffing box with internal sealing chamber ring
To be employed for pure fluids with internal sealing or for abrasive fluids with external sealing
 $p = -0.8$ to 6.0 bar

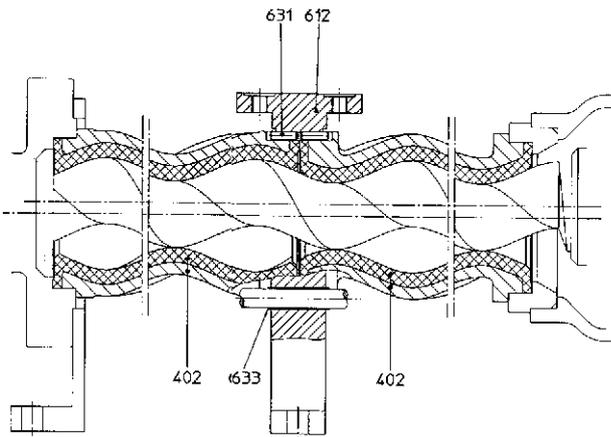

P04 Stuffing box with internal sealing chamber ring
To be employed in case of incompatibility of the external sealing liquid with the fluid pumped or if air inlet is to be avoided
 $p = -0.9$ to 12 bar

Accessories

Pump accessories: Stator setting devices, electrical heaters, bridge breakers.

Drivers: Electric motors, geared motors, variable speed transmissions, reduction gearboxes, internal combustion engines, pneumatic and hydraulic drives.

Transmission components: Couplings, V-belt transmissions, toothed belt transmissions, other types of transmission.

Base plates: Standard and special versions, wheeled trolleys, mounting flanges.

Safety arrangements: Bypass lines with safety or regulating valves, systems to guard against dry running (conductive, capacitive, thermal etc.).

Other accessories: Electrical, hydraulic and pneumatic control arrangements, filter systems, metering equipment, seal liquid and circulating systems for shaft seals, valves, flanges, flexible pipes.
