

CIRCOR DOMINATES 2018 AZIMA RANKINGS OF RELIABLE INDUSTRIAL PUMPS

Monroe, North Carolina (12/5/2018) – In a comprehensive analysis of industrial pump reliability data, CIRCOR was named to the top spot in the 2018 Reliability Ratings Report (Industrial Pumps). The report is the latest installment in an ongoing series of performance ratings published by Azima, Inc. for various classes of industrial rotating machinery.

Azima uses data science to predict machine failure months and years in advance, resulting in calculations of probability that specific pump models will be running fault-free after one, five and 10 years. The report is intended to provide plant managers, reliability engineers and IIoT professionals with insight on the products and brands having the best documented track record of quality and reliability.

The analysis included CIRCOR models from the Imo and Warren brands, with 13 of the top 33 slots occupied by those products, including #1 and #2. Over 20 years, Azima has collected condition-monitoring data from 100,000 pumps, covering more than 150 different manufacturer brands and 7,000 unique models. The 2018 report encompassed metrics for the top 100 makes and models for which Azima collects data.

“We are honored to see these results,” said Ashish Dutta, CIRCOR’s Vice President for Strategic Marketing and Product Management. “The CIRCOR family is a collection of century brands delivering highly engineered flow control solutions for critical and severe service applications. Imo and Warren pumps alone bring over 100 years of quality and innovation in flow excellence. We continue to build on their legacies by innovating every day and serving our customers around the world with reliable fluid handling solutions.”

Further information on the report is available [here](#).
