

ACG8 OptiLine

Product Description

Flow volume: 75 - 1180 l/min

Max differential pressure: 16 bar

Applications: Circulation and transfer

1. Applications

1.1 Functionality

The ACG OptiLine pump is used for a number of different fluids:

Fuel oil, vegetable oil, hydraulic oil and other hydraulic fluids, polymers, emulsions and any non-aggressive fluid with sufficient lubricating properties.

If requested, the ACE pump may be certified according to any of following classification societies: DNV, BV, LRS, ABS, RS, GL, RINA, KR, NK, RMR or CCS.

1.2 Applications

Typical applications are:

- Lubrication of diesel engines, gears, gas and steam turbines, hydro turbines and paper machines
- Circulation for cooling and filtration in large machineries, hydraulic systems and transformer oil for insulation in transformers
- Transfer onboard ships, in oil factories, refineries, tank farms etc
- Fuel supply duties for diesel engines

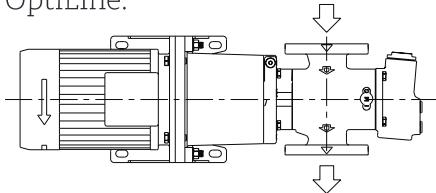

1.3 Installation

The pump is designed to be flange-mounted to its electric motor via a connecting frame and a magnetic coupling. By the angle bracket, the pump may be mounted horizontally or vertically.

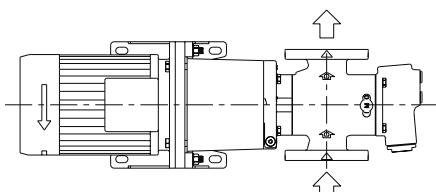

As standard, the pump is supplied without counter flanges (DIN type) but they can be included if requested.

As standard the pump is delivered with the discharge side to the right when seen from the pump shaft side (see below).

For more information about installation, see Service, Maintenance and Installation for ACG OptiLine.

Mounting standard picture M93-0.

On request the pump can be delivered with opposite flow direction, M39-0.

2. Pump model code

Pump series _____
ACG

Size _____
Power rotor diameter [mm]
045, 052, 060, 070

Lead _____
K and N = Normal lead
D = High lead, sizes 070

Generation _____
Design generation 8

Material in pump body _____
N = Nodular cast iron

Shaft seal design _____
Magnetic shaft coupling
(Size of coupling selected)
H, J, K, L, M

Mounting _____
B = Flange mounting

Valve _____
P = Pressure relief valve included with spring for max. 16 bar

Special design _____
Code group omitted for standard design (A-number)

3. Technical Data

3.1 Pressure Information

Pressure relief valve

The pump is equipped with an integral pressure relief valve with internal return, limiting the differential pressure across the pump and protecting the pump. Should the discharge line be blocked, the relief valve will open by the pressure.

The valve is adjustable for different opening pressures. The value of the pressure limit can be set at the factory and should be adjusted at installation (see Service, Maintenance and Installation for ACG OptiLine).

The maximum pressure accumulation varies with pump size, speed and viscosity, but will normally not exceed 4 bar.

The valve has a maximum set pressure of 16 bar.

Inlet pressure

Minimum inlet pressure (suction capability) is dependent on fluid viscosity and rotation speed. It increases with decreasing viscosity and decreasing speed. Information about minimum inlet pressure for each individual duty case can be obtained from IMO AB or pump selection software WinPump.

Maximum inlet pressure is 15 bar.

Discharge pressure

Maximum discharge pressure is 16 bar.

Differential pressure

Maximum differential pressure is 16 bar but reduced at low viscosities according to table below

Viscosity [cSt]	1,4	2	6	10	>12
-----------------	-----	---	---	----	-----

Max. diff. pressure [bar]	6,9	8,0	12,4	15	16
---------------------------	-----	-----	------	----	----

Refer to your IMO representative or use the pump selection software WinPump to determine the exact operating limits.

3.2 Driver information

Driver type

The power from motor to the OptiLine ACG pump is transmitted without mechanical contact over a magnetic coupling. A coupling hub with a set of permanent magnets is mounted on the pump shaft. This hub is totally enclosed by a stainless steel can. The motor hub with another set of permanent magnets rotates on the outside of this can.

Thus the pumped liquid is totally confined within the pump without the use of a conventional shaft seal.

Speed

The maximum speed is 3600 rpm. For higher speeds, contact IMO AB.

Rotation

The pump is designed to operate in one rotational direction only, as standard clockwise when facing the shaft end. Pumps for CCW operation can be delivered on special request. For shorter periods of time, a few minutes for emptying a discharge line, the pump may be operated in reverse direction, provided the back pressure is limited to 3 bar.

3. Technical Data

3.3 Sound level

Typical pump sound levels refer to free field conditions at a distance of 1 m from the pump. Noise of driver excluded in the quoted figures. The sound levels are measured at a discharge pressure of 5 bar, speed 2900 rpm and viscosity 37 cSt.

Size 045 052 060 070

Sound level dB [A] 59 63 66 68

3.4 Moment of Inertia

Moment of inertia [10⁻³ kgm²]

	Size			
Coupling sing	045	052	060	070
H	15	-	-	-
J	16	17	-	-
K	17	17	28	67
L	17	17	28	72
M	19	19	34	78

3.5 Magnetic shaft coupling

< Torque values (greater than, at least) [Nm]

	Size			
Coupling	045	052	060	070
H	10	-	-	-
J	20	20	-	-
K	30	30	25	85
L	40	40	50	140
M	60	40	80	180

3.6 Fluid viscosity

OptiLine:
1.4 – 1500 cSt

3.7 Fluid temperature

-20 – +180 °C

4. Design

4.1 Ball bearing

The pump is fitted with an internal ball bearing which continuously is being greased by the handling media.

4.2 Material & design

Model	Material pump	Material rotot	Material idler	Material seal	Material elastomers
ACG OL	Nodular cast iron	Structural steel, surface treated	Cast iron, surface treated		Special rubber

4.3 Steam tracing

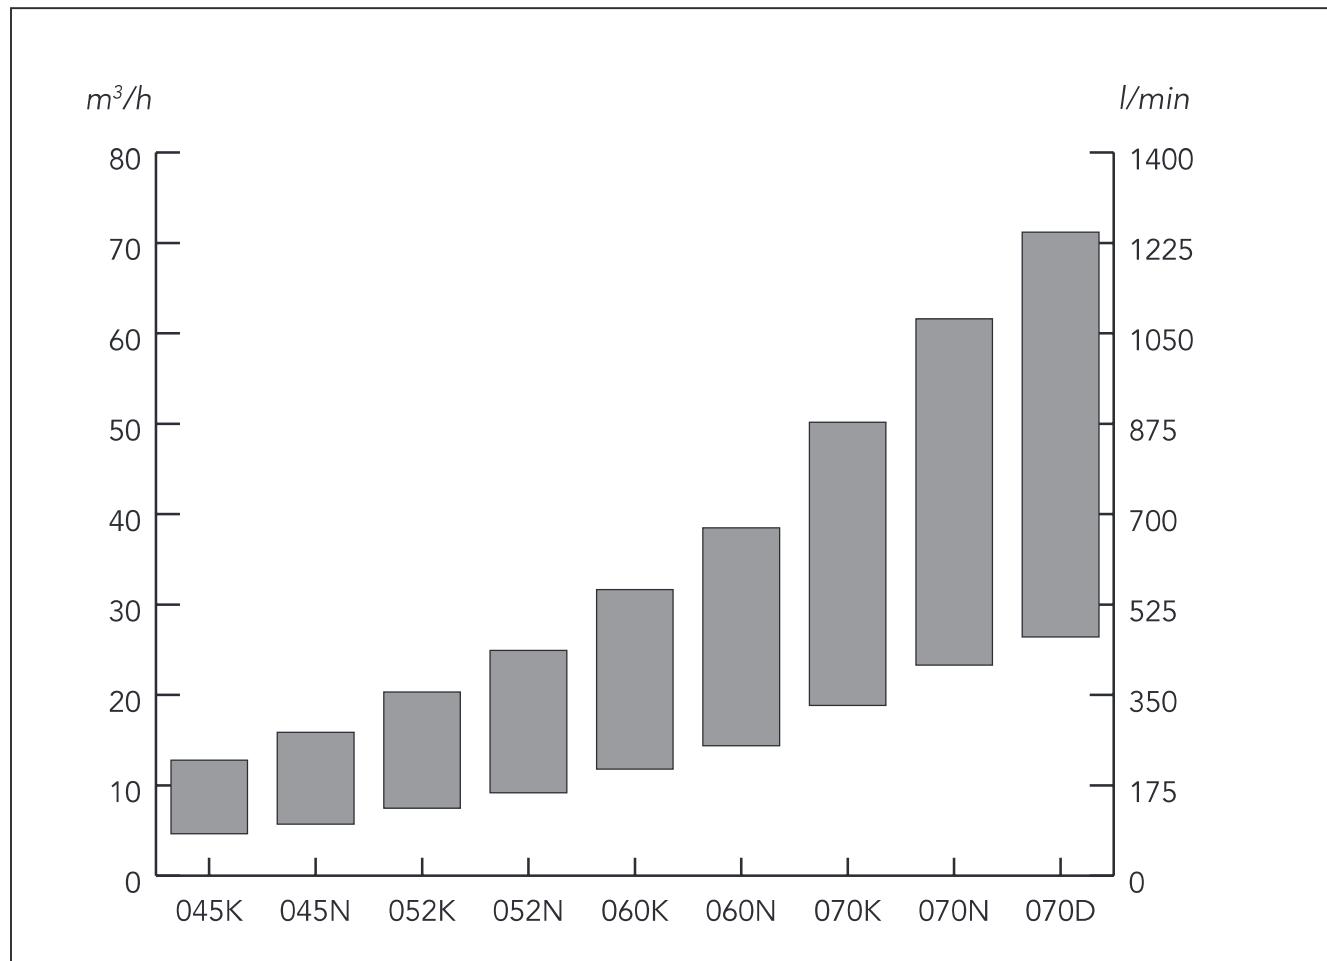

During cold start-up conditions, high viscosity could cause the rated torque for the coupling to be exceeded.

The IMO OptiLine pump series have a way to warm up the pump by leading steam into small channels at the front cover. This is recommended if cold upstart can be assumed.

See Pump Unit Dimensions for dimensions of the connections to the steam system.

5. Performance Guide

Typical performance values at 5 bar
Flow calculated at 26 cSt, power at 260 cSt.

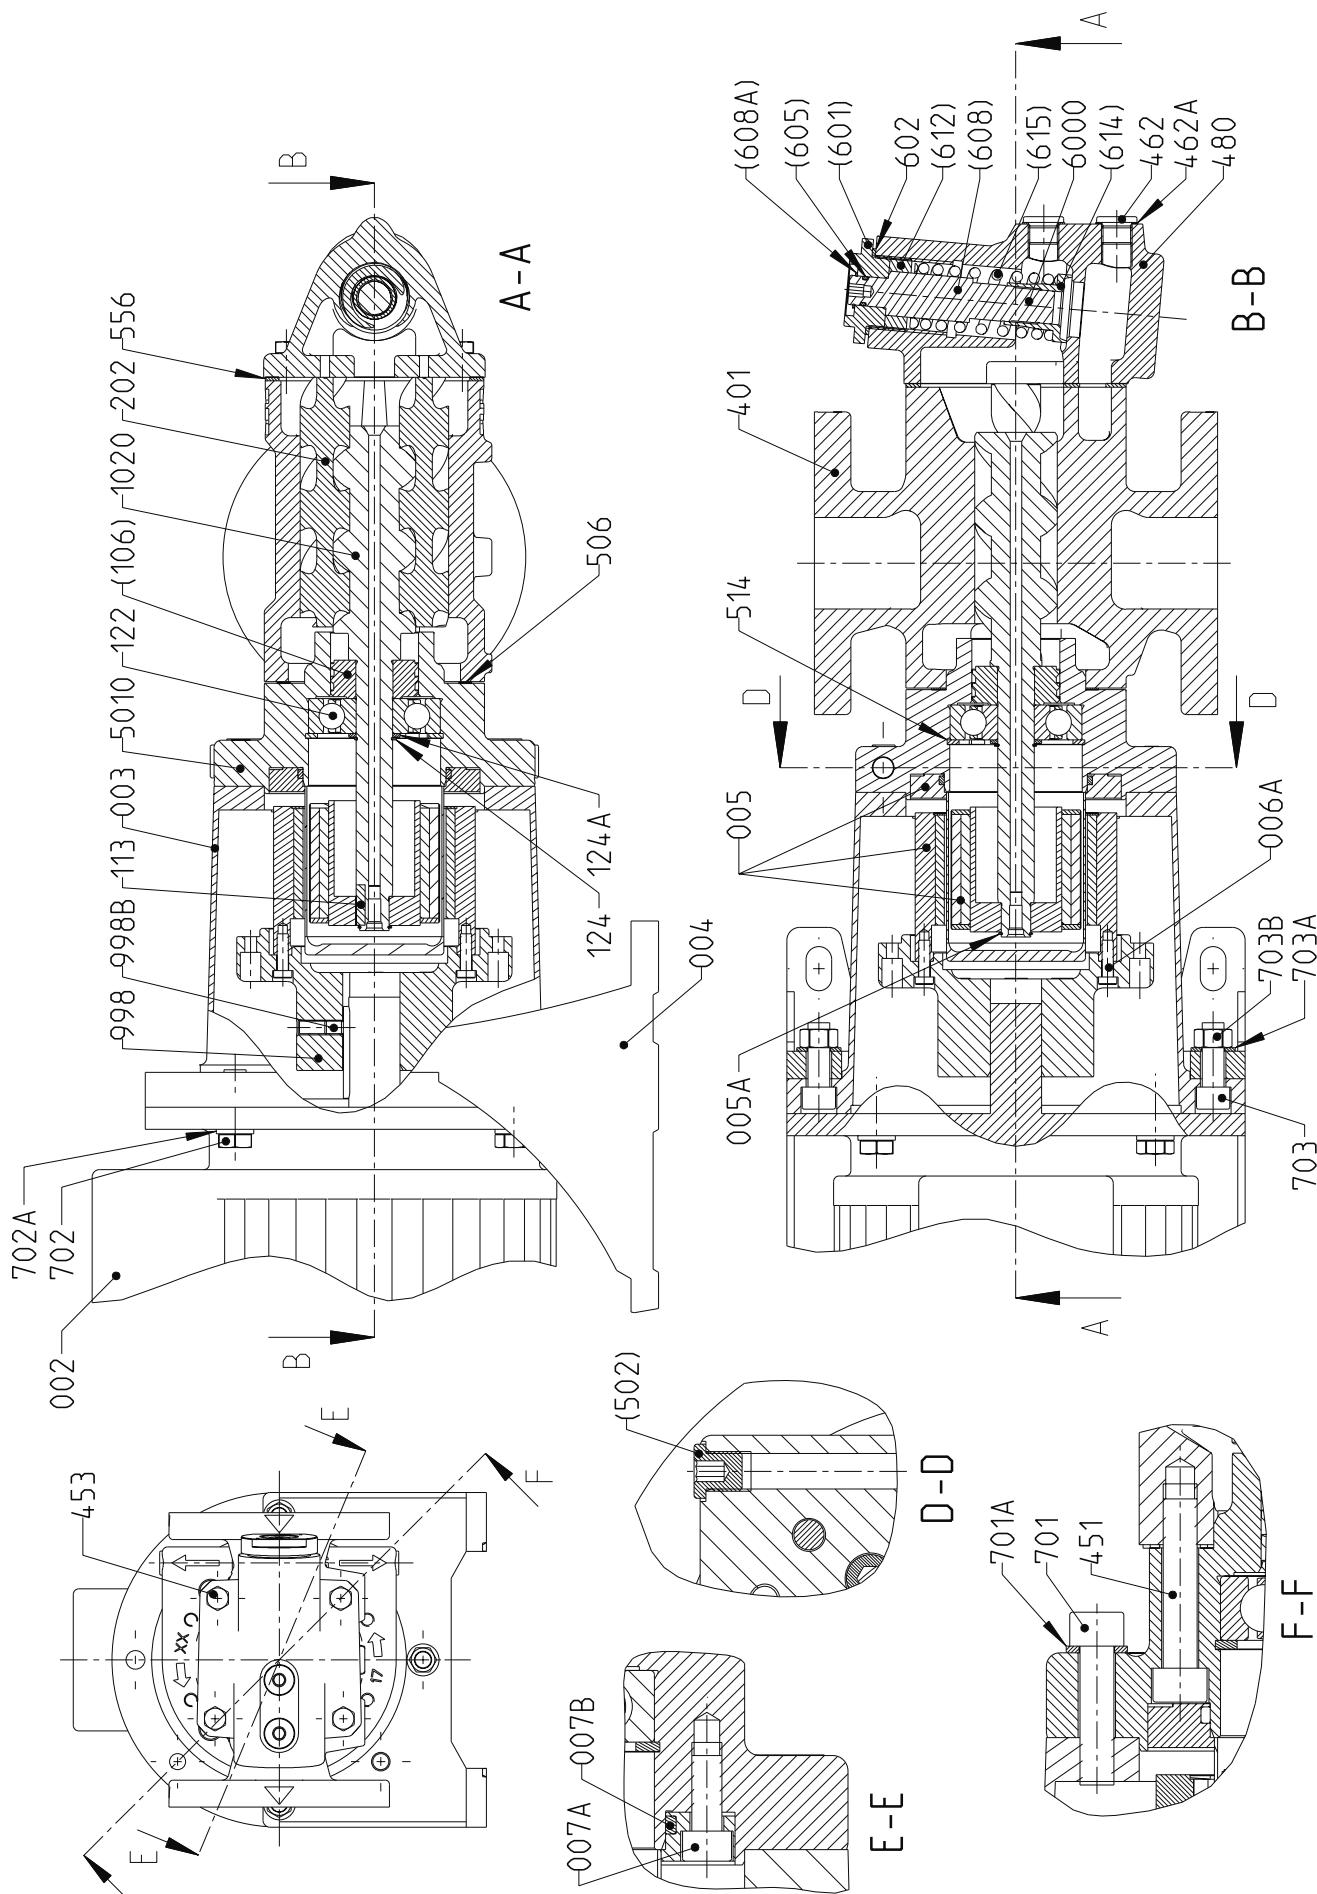

<u>rpm</u>	045K			045N			052K			052N
